DETAILED ACTION

Claims 1-11 are pending and have been examined on their merits.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* **v.** *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Naughton et al (US 6,372,494).

Claim 1 is drawn to a composition for use as a topical skin care product comprising a) a conditioned stem cell culture medium; b) a conditioned fibroblast cell culture medium; and c) a delivery vehicle adapted for topical administration.

Dependent claims are drawn to the type of cells, the form of the composition, the process by which the composition is formed and wherein the cells are genetically modified.

Claims 4 and 6-8 are product-by-process claims. M.P.E.P. § 2113 reads, "Product-by-process claims are not limited to the manipulations of the recited steps, only the structure implied by the steps."

"Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985) (citations omitted).

The structure implied by the process steps should be considered when assessing the patentability of product-by-process claims over the prior art, especially where the product can only be defined by the process steps by which the product is made, or

where the manufacturing process steps would be expected to impart distinctive structural characteristics to the final product. See, e.g., *In re Garnero*, 412 F.2d 276, 279, 162 USPQ 221, 223 (CCPA 1979)

The use of 35 U.S.C. § 103 rejections for product-by-process claims has been approved by the courts. "[T]he lack of physical description in a product-by-process claim makes determination of the patentability of the claim more difficult, since in spite of the fact that the claim may recite only process limitations, it is the patentability of the product claimed and not of the recited process steps which must be established. We are therefore of the opinion that when the prior art discloses a product which reasonably appears to be either identical with or only slightly different than a product claimed in a product-by-process claim, a rejection based alternatively on either section 102 or section 103 of the statute is eminently fair and acceptable. As a practical matter, the Patent Office is not equipped to manufacture products by the myriad of processes put before it and then obtain prior art products and make physical comparisons therewith." In re Brown, 459 F.2d 531, 535, 173 USPQ 685, 688 (CCPA 1972).

Naughton et al describe methods of making a conditioned cell culture medium composition wherein an embodiment is used with a bandage (delivery vehicle) in topical wound healing (column 5 lines 29-45). The cells used to make the conditioned culture medium include stromal cells (specifically fibroblasts) and/or stem cells (column 9 lines 35-45). The cells are preferentially culture in a three-dimensional culture (column 10 lines 14-15). "The stromal cells used in three-dimensional culture comprise fibroblasts, mesenchymal stem cells, liver reserve cells, neural stem cells, pancreatic stem cells,

and/or embryonic stem cells with or without additional cells and/or elements described more fully herein" (column 10 lines 17-21). The phrase "and/or" is interpreted in this sentence as suggesting that the conditioned cell culture medium can be produced by either just one of the cell types or a mixture of two or more of the listed cell types. The liver reserve cell is interpreted as a liver stem cell as the reference states that a reserve cell is also called a stem cell (column 15 lines 15-18). Naughton et al also teaches wherein the cells are genetically engineered (column 17 lines 34-37) and wherein the form of the composition can be a solid, lyophilized, powder, film or gel (column 22 lines 39-65). The use of human cells is specifically suggested (column 9 lines 34-65) as well as the use of a fibroblast feeder layer (column 10 lines 22-53).

While Naughton et al does not teach a specific embodiment with a combination of just stem cells and fibroblast cells, this combination is deemed to be obvious based on the suggestion by Naughton et al that the stromal cells used to form the conditioned medium can be a mixture of these cells with or without additional cells or elements (column 10 lines 17-21). This statement clearly provides motivation with a reasonable expectation of successfully producing a conditioned medium with a combination of fibroblasts and stem cells without additional elements or cells.

In addition, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine conditioned media compositions known to be used individually for the same purpose of the topical treatment of wounds. "It is prima facie obvious to combine two compositions each of which is taught by the prior art to be useful for the same purpose, in order to form a third composition to be used for the very

same purpose[T]he idea of combining them flows logically from their having been individually taught in the prior art." In re Kerkhoven, 626 F.2d 846,850, 205 USPQ 1069, 1072 (CCPA 1980).

Therefore the teaching of Naughton et al renders obvious Applicant's invention as claimed.

Conclusion

No claims are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LAURA SCHUBERG whose telephone number is (571)272-3347. The examiner can normally be reached on Mon-Fri 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jon Weber can be reached on (571) 272-0925. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
